UC Berkeley

There I was in my final round interview, being asked by a partner at one of the most prestigious management consulting firms (Bain & Co.) to calculate the revenue, costs, and profit of introducing a "children get in free" promotion at the Oakland Coliseum. Instead of panicking, I thought, "Whew! Thank goodness for mental math."

As a child, I had always wondered, "What was the use of being able to do abacus in my head?" Sure, it was helpful in school, especially on tests that did not allow calculators. It also trained me to concentrate for long periods of time, an invaluable skill. Moreover, when eating out with friends, I could calculate how to divide the cost and tip among us. But beyond that, I never thought I would use mental arithmetic anywhere else, especially in matters of direct importance. So I got through life, until my second to last semester of college, not knowing how crucial of a skill it was.

At my interviews for the highly sought after jobs in strategy management consulting, I discovered the decisive difference mental math made. It allowed me to focus on the business problems presented without being bogged down by the number crunching, which significantly improved my interview performance. Interviewers in the business world, not only in management consulting, but especially in investment banking and accounting as well, look very favorably upon job candidates with strong quantitative skills. There is no question about it; I would not have had success at interviews without the mental abacus in my head.

CAAA has reached today's success due to the hard work and contributions of members, teachers and its volunteer parents. We appreciate everyone's enthusiastic support. We hope you will continue to participate in our future activities.

中美珠心算學會有今日之成果, 要謝謝所有的會員、老師、志工及家長們、對本學會長久的支持與鼓勵, 也希望您繼續本著您的熱心, 共同來參與我們的活動, 和我們一起邁向新的里程。
